

Transform

N-P-K

Reduce the cost
Increase crop yield
Grow faster!!

What do plants need for growth?

For plant growth, there are various factors, including water, air, sunlight, soil and nutrients, which are the essential natural sources for growing stems, leaves, flowers and fruits. Therefore, it helps produce high-yielding crops and generate a great farmer's income.

The main nutrients include 17 minerals;

3 of them have comprised of water and air namely

Carbon
(C)

hydrogen
(H)

Oxygen
(O)

Other 14 minerals are derived from the soil

can be categorized into 3 elements below.

1) Primary Elements

- Nitrogen (N)
- Phosphorus (P)
- Potassium (K)

2) Secondary Elements

- Calcium (Ca)
- Magnesium (Mg)
- Sulfur (S)

3) Micronutrients

- Iron (Fe)
- Copper (Cu)
- Manganese (Mn)
- Chlorine (Cl)
- Zinc (Zn)
- Boron (B)
- Molybdenum (Mo)
- Nickel (Ni)

Transform N-P-K

Contain primary elements: Nitrogen (N),
Phosphorus (P), and Potassium (K)

Available in 2 formulas:
Formula 20-6-6 and Formula 6-6-20

Formula 20-6-6

- ☞ Increase growth rate
- ☞ Increase root, stem, and bud development
- ☞ Feed leaves to produce chlorophyll
- ☞ Improve nutrient absorption in leaves and roots

Formula 6-6-20

- ☞ Increase flowering and fruit development
- ☞ Increase fruit size by increasing starch and sugar production
- ☞ Improve higher-quality crop yields and fruits
- ☞ Improve nutrient absorption in leaves and roots

5 Key Benefits of Transform N-P-K

All farmers must have

1 The Use of High-Quality Surfactant in Liquid Fertilizer

Helps lower the surface tension of the formulation to improve the spreading and adhesion of the fertilizer on the leaf surface, despite the rain.

2 High Technology of "Transform NPK" Production guaranteed by international standards

With high-quality Potash and Phosphate imported from its origin, Russia - the world's No. 1 exporter of nitrogen fertilizer and No. 2 in phosphorus and potassium fertilizers.

Controlled at 60-80 degree Celsius to prevent the formation of chemical residues in the fertilizer that can be further decomposed in the later stage after being used to avoid damage to plants.

Transform NPK finished product with the auto-seal bottle cap locking provides all bottles with anti-bacterial protection while preventing spilling or leaking to ensure weight and high-quality standards in every bottle.

3 Innovative Nano Liquid Fertilizer

Transform NPK is designed to help plants absorb nutrients faster within 24 hours. Nutrient uptake helps facilitate plant digestion of food, including photosynthesis, hormone production, and disease prevention; therefore, these are essential factors in increasing crop yields.

4 "Chelated Micronutrients" Technology

Helps the fertilizer penetrate through the process of complex encapsulated micronutrients that can hold on to the leaves for a longer time for better absorption.

5 Optimal combinations of Elements and Nutrients

Liquid fertilizer Transform NPK can be used with other soluble products by spraying directly to the leaves to increase faster absorption and cause no chemical residues in plants.
