**Prostate
cancer**

Helps prevent
Leukemia

PREBIOTIC

Prebiotics are food for probiotics.
Therefore, eating a lot of foods with prebiotics
will help the probiotic microbes work better.
When the good microbes work well (eliminate
pathogenic microbes), the body will also become
healthy accordingly.

PRE & PRO BIOTIC

PROBIOTIC

It is a small type of good microorganism that helps
the digestive system and other systems of the body.
When there are a right amount of microorganisms,
they are sometimes called "living microorganisms".
they have the ability to withstand acids and bases,
helping to produce substances that resist or
eliminate pathogenic microorganisms. Therefore,
"probiotics" help create a balance in the entire
system of the body.
