### Professional oral care

NON-SLIP HANDLE FOR A COMFORTABLE GRIP

**0.12MM ULTRA-SOFT BRISTLES** 

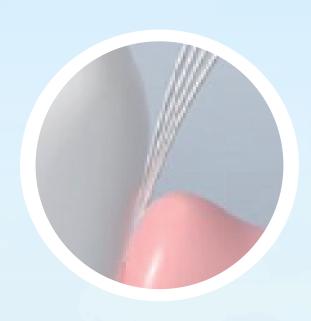

PBT BRISTLES FOR GENTLE GUM PROTECTION

## ADVANTAGES OF THE BENFITE' TOOTHBRUSH

### **DEEP CLEANING BETWEEN TEETH:**

O.12mm ultra-fine bristles easily reach deep between teeth, effectively removing food debris and plaque. The flexible bristles adapt to the curves of your teeth for a more thorough clean and better coverage of hard-to-reach areas.

#### **HANDLE ADVANTAGES:**

The brush handle features a sturdy PP main structure combined with a soft, non-slip TPR coating. This design ensures a secure grip even in wet conditions and fits all hand sizes, enhancing comfort and preventing slipping during brushing.

#### **DUAL-TAPERED BRISTLE DESIGN:**

Compared to traditional bristles, the dual-tapered bristles remove 30% more debris from between teeth, leaving your mouth fresher and healthier. They penetrate deep into interdental spaces, boosting cleaning efficiency by 30% and providing thorough care without missing any spots.

#### **GUM PROTECTION:**

The Benfite soft-bristle toothbrush features gentle bristles that effectively reduce irritation and damage to the gums. Suitable for sensitive mouths, bleeding gums, children, seniors, and those recovering from surgery. Helps alleviate discomfort caused by gum recession in the elderly.

Soft bristles prevent wound irritation and promote healing after surgery.
