FISH OIL

A dietary source of deep-sea fish e.g. anchovy, mackerel, herring, tuna, salmon that contain **Omega-3 and Omega-6 fatty acids** called **Docosahexaenoic acid (DHA) and Eicosapentaenoic acid (EPA)**. These substances are needed for various functions and have been proved to be significantly effective.

- reduce cholesterols and triglycerides levels in the blood
- prevent heart attack, cardiovascular diseases, and hypertension
- prevent the risk of stroke and paralysis

EPA (530 mg)	DHA (100 mg)
This unsaturated fatty acid helps in lowering cholesterol and triglyceride levels in arteries, strengthening the blood vessels, and preventing thrombosis. This can significantly lower blood pressure and the risks of heart diseases.	This unsaturated fatty acid helps improve the eye's health and brain development and function. It helps improve cognition (i.e. thinking and learning) in children while reducing risks of Alzheimer's disease in the elderly. It also helps treat the optic nerve.

KRILL OIL

Krill is a tiny sea crustacean (*Euphausia Superba Krill*) that inhabits the deep ocean by using the **Eco-Harvesting®** technology, krill oil is directly extracted on board of the ship to maintain freshness and high concentration of Omega-3 fatty acid, EPA, DHA, and Phospholipids. The at-sea extracted krill oil in small molecules helps faster absorption and effectiveness.

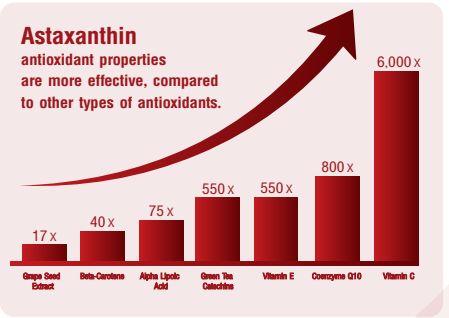

- Reduce the build-up of cholesterol in the blood
- Support heart and arteries health
- Treat the brain and nerve system
- Improve skin elasticity to look glow
- Reduce menstrual cramps and period pain

ASTAXANTHIN

King of Antioxidant

Astaxanthin extracted from a species of natural green microalgae called *Haematococcus Pluvialis* which is mostly found in Scandinavian Peninsula. Under harsh conditions, microalgae develop a secondary cell wall to **produce antioxidants – carotenoids that contain a vivid red pigment called Astaxanthin**. This Super Antioxidant helps prevent inflammation of free radicals and reduce the cellular aging process by lengthening telomeres, resulting in skin radiance. Astaxanthin also helps support vision and cardiovascular health.

VITAMIN E

Essential vitamin E needed for body functions. It helps strengthen the surface of red blood cells. It also helps support blood circulation that reduces the risk of the blood clot and thrombosis. Vitamin E helps promote red blood cell production and blood vessel health. Moreover, Vitamin E helps lower levels of inflammation in the body that can cause other diseases.

Key ingredients

Fish oil	1,000 mg.
Omega-3 fatty acid	630 mg.
— Eicosapentaenoic acid (EPA)	530 mg.
— Docosahexaenoic acid (DHA)	100 mg.
Krill oil	50 mg.
Microalgae extract	20 mg.
Astaxanthin	1 mg.
Vitamin E 50%	10 mg.

Directions: Take 1 capsule daily with breakfast
